IN THE CLAIMS

1. (original) A magnetic field generator for MRI comprising;

a generator main body including a pair of plate yokes opposed to each other with space in between, a magnet disposed in each of opposed surfaces of said pair of plate yokes, and a column yoke for magnetically connecting said plate yokes; and

a member, made of a non-magnetic material, for covering the whole generator main body.

2. (original) A magnetic field generator for MRI comprising:

a generator main body including a pair of plate yokes opposed to each other with space in between, a magnet disposed in each of the opposed surfaces of the pair of plate yokes, and a column yoke for magnetically connecting the plate yokes; and

a member, made of a non-magnetic material, for covering a top and a side of said generator main body or a side of said generator main body or a side of said generator main body.

- 3. (currently amended) The magnetic field generator according to elaim 1-or 2 claim 2, said covering member is made of a mesh of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 4. (currently amended) The magnetic field generator according to elaim 1 or 2 claim 2, at least a portion of said covering member, which covers an opening portion of said generator main body, includes a mesh of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 5. (currently amended) The magnetic field generator according to elaim 1 or 2 claim 2,

said covering member is made of a closely woven fabric of stainless

steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.

- 6. (original) The magnetic field generator according to claim 5, at least a portion of said covering member, which covers an opening portion of said generator main body, includes a mesh of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 7. (currently amended) The magnetic field generator according to elaim 1 or 2 claim 2, at least a portion of said covering member, which covers an opening portion of said generator main body, includes a mesh of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics, and other portion of said covering member is made of a closely woven fabric of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 8. (currently amended) The magnetic field generator according to any one of claims 1 to 7 claim 2, further comprising a member for fastening said covering member to said generator main body.
- 9. (original) The magnetic field generator according to claim 8, said fastening member includes a string or a rope made of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 10. (currently amended) The magnetic field generator according to elaim 8 or 9 claim 8, said fastening member is provided on one side of said pair of plate yokes.
- 11. (currently amended) The magnetic field generator according to elaim 8 or 9 claim 8, said fastening member is provided so as to pass around said covering member.
- 12. (currently amended) The magnetic field generator according to any one of claims 8 to 11 claim 8, said fastening member is removable after said magnetic field generator is transported to a destination thereof.

- 13. (currently amended) The magnetic field generator according to elaim 1 or 2 claim 2, said covering member is removable after said magnetic field generator is transported to a destination thereof.
- 14. (original) A method of covering a magnetic field generator for MRI, having a generator main body including a pair of plate yokes opposed to each other with space in between, a magnet disposed in each of opposed surfaces of said pair of plate yokes, and a column yoke for magnetically connecting said plate yokes, comprising steps of:

covering the whole generator main body by means of a member made of a non-magnetic material; and

fastening said member to said generator main body.

15. (original) A method of covering a magnetic field generator for MRI, having a generator main body including a pair of plate yokes opposed to each other with space in between, a magnet disposed in each of opposed surfaces of said pair of plate yokes, and a column yoke for magnetically connecting said plate yokes, comprising steps of;

covering a top and a side of said generator main body or a side of said generator main body or a bottom and a side of said generator main body by means of a member made of a non-magnetic material; and

fastening said member to said generator main body.

- 16. (currently amended) The method according to elaim 14 or 15 claim 15, at least a portion of said member, which covers an opening portion of said generator main body, includes a mesh of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 17. (currently amended) The method according to elaim 14 or 15 claim 15, said member is made of a closely woven fabric of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.

Express Mail No.: EV734458488US

16CN-G0304 PATENT

- 18. (currently amended) The method according to elaim 14 or 15 claim 15, at least a portion of said member, which covers an opening portion of said generator main body, includes a mesh of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics, and other portion of said covering member is made of a closely woven fabric of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 19. (currently amended) The method according to any one of claims 14 to 18 claim 15, said fastening step includes a step of fastening said member to said generator main body using a string or a rope made of stainless steel, aluminum, copper, nylon, cotton, hemp, flax, rubber or plastics.
- 20. (original) The method according to claim 19, said member for covering said generator main body and said string or rope are removable after said magnetic field generator is transported to a destination thereof.
